Ever wonder what goes on in your bosses brains when they make that decision? Or what can genes, hormones and evolution tell us about leadership and management?

If the above questions interest you, be sure to attend this forum!

In this forum, a variety of renowned scholars will present cutting edge research on how genetics, hormones, brain functioning and evolution affects organizational phenomenon such as decision making, leadership and job performance.

This forum promises to be an exciting intellectual journey that will transform the way you view the links between biology and organizations.
